Introduction

Lodi specialises in vehicle and equipment lifecycle management for companies and organisations working in development and remote environments. By utilising their 80 years combined field experience the Lodi team has crafted a range of services to optimise fleet and equipment performance, maximise personnel safety and minimise costs. The services Lodi provides are based on dependability, transparency, flexibility and sustainability - we understand the need for a service provider who can be trusted to deliver.

Fleet Assessment and Consultancy

Our experienced automotive specialists will provide a detailed analysis of current fleet operations, identify problems and deliver realistic solutions and achievable targets.

In order to achieve consistency, our consultants follow a strict fleet assessment process which ensures the efficient collation of high quality data and information. Our assessment will include interviews with key operational staff, hands-on inspections of vehicles, equipment and facilities plus an audit of fleet operating costs and fleet management procedures.

The assessment report will include a summary of recommended actions needed to achieve quantifiable improvements in fleet management. These can cover:

- Fleet management systems, data collection and data management
- Vehicle reliability and vehicle downtime
- Spare parts inventory management
- Technician and driver skills and training needs
- Safety - accident monitoring and control
- Cost of ownership - repairs and maintenance, fuel, insurance

Procurement and Supply

Lodi has an established network of premium and cost competitive suppliers and can source products from some of the world's leading manufacturers of specialist vehicles and equipment. Based on an assessment of the client's requirements and local service capacity, Lodi will present alternative solutions offering the best possible combination of value for money, support and reliability. Lodi's Procurement Service covers a range of products including:

- Motorcycles and other light vehicles
- Standard and utility vehicles
- Trucks and buses
- Agricultural and construction equipment
- Special vehicles
- Spare parts and tyres
- Generators and pumps

Project Management

Lodi's Project Management service combines proven experience and resource management with effective planning, quality control and time management to achieve our client's project objectives.

Lodi will systematically capture all project tasks electronically using appropriate software to ensure adequate resources are allocated to activities.

To achieve optimum project results Lodi will supplement the capability of their core management and technical staff with specialist contracted resources. Above all, we are committed to ensuring that all project participants understand their roles and fully support the aims of the project.

Lodi can implement specific fleet management improvement programmes, tailored to the needs of clients, through its comprehensive Project Management service delivering real and measurable improvements in fleet reliability, vehicle downtime and operating costs.

WORKSHOPS AND
MAINTENANCE

FLEET
MANAGEMENT
SERVICES

Workshop and Maintenance Management

Lodi's core services include workshop and maintenance management options to support a range of on-the-ground solutions. Our standard products are complimented by a bespoke service which ensures customers receive exactly the right solution for their needs.

Lodi Centres

Lodi Centres will provide consistent, high quality repair and maintenance and fleet management services for commercial and government fleet users via a network of workshop-based operations. The Centres will also supply and support vehicles as well as construction and agricultural equipment.

Customer Workshops

Lodi provides a project management service to organisations running or planning to run their own vehicle workshops or service programmes. This service includes workshop design and construction, recruitment and training of skilled staff and the installation and maintenance of management systems.

Container Workshops

Lodi's range of flexible, self-contained workshop systems has been designed for rapid deployment. The system is based on container modules supporting a light roof structure and can provide maintenance for light vehicles, trucks and construction equipment. Each module is pre-equipped to provide parts and consumable stores, clean workshop, office and training facilities.

Vehicle Test and Certification

Our MoT service is designed to improve the road worthiness of vehicles and ensure compliance with road traffic legislation. By working with the Local Authorities to provide effective services, Lodi's MoT programme will ensure that heavy goods vehicles, buses and cars are maintained to a minimum legal standard through an annual inspection and certification process.

Fleet Management Services

Lodi provides a range of cradle-to-grave services designed to help organisations optimise fleet performance, control costs and maximise personnel safety. For example, by installing the right systems to record and report fleet information we can facilitate year on year improvements in fleet performance and by adopting a Lodi Contract Maintenance programme customer's will benefit from a fixed cost maintenance service combined with guaranteed vehicle availability and reliability.

- Fleet management systems and data management
- Contract maintenance
- Fleet tracking systems
- Financial and operational lease packages
- Driver and technician training

understand | advise | deliver

Lodi specialises in vehicle and equipment lifecycle management for Aid & Development, Commercial, Government and Defence organisations working in developing countries and remote environments.

We provide a comprehensive Fleet Management Consultancy service to assess and provide a detailed analysis of current fleet operations and provide realistic solutions and achievable targets.

Through our network of premium and cost competitive suppliers we can assist with sourcing products from some of the world's leading manufacturers of specialist vehicles and equipment.

Our Project Management service combines proven experience and resource management with effective planning, quality control and time management to achieve our client's project targets and objectives

Our Workshops and Maintenance Management services provide a range of effective fleet maintenance solutions. Lodi Centres will guarantee a consistent standard of vehicle maintenance and value for money; our customer workshop management programme will enable organisations to focus on core activities and Lodi Container Workshop Systems provide regular fleet maintenance in remote regions.

Lodi's cradle-to-grave Fleet Management services are designed to ensure optimum fleet performance, control costs and maximise personnel safety. We will work with you to achieve truly sustainable solutions and year-on-year improvements in fleet performances.
