

## Lodi Container Workshop Systems

### Container Workshops

A flexible rapid response Workshop System designed to support emergency relief operations and for fleets operating in remote regions where the support infrastructure is limited.

### Key Operational Criteria

- Deployable in less than 3 weeks.
- Operational in less than 2 months
- Lightweight
- Low-cost
- Self-contained
- Modular and flexible
- Adaptable for a range of fleet sizes
- Adaptable for a range of vehicle types
- Secure storage of equipment and parts
- Protection from extreme weather conditions
- System lease options

### Key Design Criteria

- Use of containers for optimum rapid response, transport, ease of construction, flexibility and security
- Containers to be used for packing and equipment transport and will form a key part of the structure
- System to include alternative lightweight, modular side structures where the lack of on-site lifting facilities restricts the use of containers
- Roof section to be modular, prefabricated, lightweight, easy to assemble and low-cost
- Equipment will include options for provision of electricity and other services such as compressed air, welding, communications and water supply.
- System to include optional enhanced weather protection
- Workshop equipment to be specified to provide a high standard of repair and maintenance for all specification of vehicles and machinery.
- Equipment to include vehicle computer diagnostics
- System to include a low-tech pre-fabricated, modular ramp option for truck servicing and inspection
- Option of one or more hydraulic 2 post lifts for vehicles up to 2 tonne 4x4 SUVs
- Facilities for secure offices, parts storage and closed, clean workshop
- Built-in jacking system to facilitate unloading system from trucks
- System to incorporate a Fleet Management System, workshop management and parts inventory management
- Use of containers for optimum rapid response, transport, ease of construction, flexibility and security
