

Technical Services

Through our access to an extensive database of skilled technician, Lodi can provide a technical solution to meet most field situations and keep fleets moving. Let us place a technician (or a team) with you to resolve technical problems and improve fleet performance. Where there is a short term need for skilled technicians or quick problem resolution Lodi can provide the necessary resources.

Pre Delivery Service – vehicle inspection and preparation

The way a new vehicle is prepared when deployed is a critical factor in its medium and long term performance. A properly prepared vehicle will pay its owner major dividends in reliability, cost and performance. The Lodi Pre-delivery Service includes:

Extreme environment Inspection:

- General vehicle condition check and extreme environment preparation
- Use of proper lubricants
- Engine suitability for local fuels
- Filtration and cooling

Installation of Accessories and attachments:

- Suspension upgrades
- Installation of safety enhancements – roll cages, ballistic blankets, safety glass
- Load carrying and winching attachments
- Minor conversions for improved security and stowage

Problem Diagnosis and Rectification

Fleet operators may have vehicles in their fleet which are routinely underperforming due to poor maintenance, incorrect vehicle specifications or faults associated with local conditions or repair methods. They may be without the tools or specialist resources needed to diagnose or rectify faults.

To address serial technical problems and provide long-lasting solutions, Lodi Services can provide technicians to carry out a fleet inspection, report on vehicle condition, identify faults and causes and put in place a remedial programme to restore fleet reliability.

Refurbishment of vehicles for re-living or disposal.

Permanently or temporarily off-the-road vehicles represent a waste of expensive resources. Whether the objective is to ensure maximum utilisation of existing fleet resources or to realise optimum resale value of assets, a vehicle refurbishment programme can provide massive cost savings or inject valuable, incremental funds into operational budgets.

To help fleet operators take the right fleet decision, Lodi Services can carry out a full assessment of cannibalised or derelict vehicles and provide a report on the feasibility and cost of refurbishment. If vehicle refurbishment is the agreed way forward, Lodi Services are able to develop and implement a refurbishment programme which meets the quality standards and parameters agreed with the client.

Sub-contract Skilled Technical Resource

Lodi can provide skilled vehicles technicians on short term contracts to fill a resource gap or for vehicle maintenance and repairs in emergency situations enabling organisations to respond quickly and effectively and focus on delivering core services.

Technician Training

Effective routine maintenance is rule no. 1 for long-term vehicle reliability and there is no-one better placed than a local technician for providing good vehicle maintenance and solving vehicle problems, if properly trained.

To help the development of skilled local technicians, Lodi Services can provide structured vehicle maintenance courses or enrol client technicians to work alongside Lodi staff to receive on-the-job work experience.

As an integral part of a Lodi fleet management programme or during a Lodi technician assignment, training of local technicians will be an important element of Lodi's commitment to improving vehicle performance AND providing sustainable development of local resources.
